Heinrich Scholz (1884-1956)

Texts

Part one of the lecture course *Einführung in die Kantische Philosophie* (1950-1951).
"The anti-metaphysical attitude of the neo-positivist movement is notorious. It is an essential mark of what its members regarded as the scientific world view. The paper focuses on a metaphysical variation of the scientific world view as proposed by Heinrich Scholz and his Münster group, who can be regarded as a peripheral part of the movement. They used formal ontology for legitimizing the use of logical calculi. Scholz's relation to the neo-positivist movement and his contributions to logic and foundations are discussed. His heuristic background can be drawn from a set of six methodological 'articles of faith', formulated in 1942 and published here for the first time."

Karl Barth (1886-1968)

"This paper assesses the nature of Collingwood's rehabilitation of the ontological argument through a close reading of Collingwood's private correspondence with Ryle following the publication of "An Essay on Philosophical Method." The paper asks whether Collingwood's rehabilitation of the ontological proof entails that he is committed to a form of precritical, dogmatic metaphysics, as Ryle suggests. The paper concludes that Collingwood's rehabilitation of the ontological proof is rather unorthodox and does not, contrary to what one might expect, contradict the claim that existence is not a real predicate."

Chapter 5: Collingwood's 'rehabilitation' of the ontological argument -- pp. 67-78.
"In this chapter I would like to consider a lively debate that took place between Collingwood and Ryle in the aftermath of the publication of *An Essay on Philosophical Method* (EPM). The debate was prompted by Collingwood's reappropriation of the ontological argument in Chapter 6 of EPM where he defended what he regarded as a neglected kernel of truth in the traditional proof. Ryle launched a fierce attack on Collingwood's attempted rehabilitation of the ontological argument in the pages of *Mind*, where he accused Collingwood of ignoring crucial philosophical developments which had occurred in the last two hundred years, in particular the thesis that all existential propositions are knowable *a posteriori* and the corollary that there can be no necessary existential judgements. Collingwood newer took up Ryle's challenge publicly, but did attempt to clarify his own position in a number of private letters.(*) It was Errol Harris who replied to Ryle publicly on
Collingwood's behalf, locating Collingwood's defence of the ontological argument in the tradition of Hegel's objective or speculative idealism, thereby adding further fuel to the controversy. As a result of Harris's reply on behalf of Collingwood and the private exchange with Collingwood himself Ryle responded with a further article aimed at reasserting his original position that there can be no necessary existential propositions." p. 67 (some notes omitted).

(*) The Collingwood-Ryle correspondence is deposited in the Bodleian Library in Oxford, Collingwood Department 26/3.

"In this paper, I discuss the role of Anselm's ontological argument in the philosophy of R. G. Collingwood. Anselm's argument appears prominently in Collingwood's *Essay on Philosophical Method* (1933) and *Essay on Metaphysics* (1940), as well as in his early work *Speculum Mentis* (1924). In the proof, Collingwood finds the central expression of the priority of "faith" in the first principles of thought to reason's activities. For Collingwood, it is Anselm's proof that clearly expresses this relationship between faith and reason. The two elements of this analysis that must be understood if one is to understand Collingwood's use of the proof are what he means by "the idea of an object that shall completely satisfy the demands of reason" and the "special case of metaphysical thinking." I analyze both of these elements and conclude by showing how Anselm's proof is essential to Collingwood's historical science of mind."

**Charles Hartshorne (1897-2000)**

**Texts**

   See in particular Chapter 2: *Ten ontological or modal proofs for God's existence* pp. 28-117.

   "This article examines criticisms of the ontological argument proposed by Plantinga and Alston. The conclusion is reached that the denial of existence can be contradictory if this denial implies that the ground of all possibility is itself but a mere possibility, or that an indispensable predicate -- one whose actualization or being instantiated is necessary to reality as such -- is yet dispensable. It is conceded that the argument is a proof for the divine existence only on the assumption that the idea of God is logically admissible, and not an absurdity. It is also shown that the argument need not beg the question by assuming from the outset a subject of predication, God, but can argue rather from the predicate divine and deduce from this predicate the necessity of its instantiation in some suitable actuality."

Studies

"In this paper, I focus on Hartshorne's "de dicto" modal reconstruction of the ontological argument for God's existence. I consider "six" senses of necessity, and for all these senses, I call into question either the truth of at least one of the premises of the reconstructed argument or the truth of at least one of the axioms of modal logic itself. the main conclusion is that it is probably impossible to formalize within a "sound" modal logic any traditional or semi-traditional version of the ontological argument in such a way that it is both formally valid yet has necessarily true, "a priori" known premises. I believe that any claim to the contrary is based on acute modal confusion."

With a foreword by Charles Hartshorne.

Reply to the article published in Erkenntnis, 15, 1980, 301-331. "Professor Joel Friedman has contended that there is no univocal sense of "de dicto" necessity in terms of which the five axioms of Lewis' S5 system of modal logic and the two premises of Hartshorne's ontological argument can be known "a priori" to be true. Goodwin shows how Friedman's challenge can be met in either Carnap's or Kripke's sense of logical necessity when Hartshorne's temporal interpretation of possibility is taken into account."

"The author analyzes the validity of a certain variation of Anselm's "ontological argument", namely the modal-logical version from Charles Hartshorne. He firstly studies the origin of Hartshorne's arguments, whose starting point is an interpretation of Anselm; secondly, the modal-logical argument from Hartshorne will be presented together with its presuppositions and implications. Finally, the author proposes an evaluation of Hartshorne's approach."

"The importance of Hartshorne's use of the ontological argument of a God's existence lies not merely in his recognition of the second proof of Anselm's argument but more so in his di-polar Panentheism as in his analyses of the meaning of "necessary existence" which allows it to be significantly attributed to an entity. Nevertheless, Hartshorne's claims that the 'second proof' escapes the earlier criticisms of the ontological argument and that necessary existence implies factual existence are subject to criticism."

"This paper restates and criticizes the modal version of the ontological argument given by Charles Hartshorne in The logic of perfection. I show that the argument is valid in modal systems as strong as Lewis' S5 and that it is not subject to some familiar refutations of the ontological argument. I argue that, nevertheless, the ontological argument does not prove what it sets out to, and that the value of Hartshorne's modal version of the argument is that it enables us to state with some precision why this is so."

"A formal proof, paralleling the argument given by Charles Hartshorne in his reply to my "Hartshorne's modal proof," is given and discussed. His version of the ontological argument in modal logic seemed to offer a modalized ontological argument valid for a system no stronger than Lewis' S3. However, a logical mistake in one of the lemmas to the main proof invalidates this aspect of the argument. (see section 8.5 of my "Logic for philosophers," Harper and Row, 1971). The main critical points of the paper were, however, independent of this proof. The conclusion of the paper is that the ontological argument is redundant if sound."

"This work traces the dimensions of two independent attempts --- those of Karl Barth and Charles Hartshorne -- to set aside the burden of the Kantian heritage in so far as it has influenced the development of contemporary philosophical-theological
thinking. The focal issue throughout is the role that the Anselmian formulation of the ontological argument plays in these respective attempts. Such an issue is raised not out of an historical-critical interest in the writings of the eleventh-century saint, but because both Barth and Hartshorne have found the *Proslogion* proof for God to be a particularly propitious vantage point from which to gain a fresh perspective on their own professional preoccupations. It is interesting to note, however, that while Barth turns to a discussion of the ontological argument as a phase in the development of a methodological program which entails the rejection of natural theology, Hartshorne undertakes a defense of the same argument in an effort to establish an appropriate basis for the acceptance of natural theology. The scope of the chapters to follow has been shaped by the conviction that there is a pressing need to account for this rather disconcerting difference.

"The essay examines the syntactical, semantic and philosophical issues raised by Charles Hartshorne's formulation of the ontological argument for the existence of God and by his effort to distinguish his dipolar panentheism from supernatural theism. The essay shows how the argument is invalid, admitted by Hartshorne. It shows Hartshorne's metaphysics employs a natural language, not a modal one. It elucidates the logical structure of dipolar theism. It shows faith need not be contrary to reason though faith cannot expect reason to prove theism. It shows that any non-dogmatic rational inquiry into theistic belief must be open and on-going."

Chapter IV. *The ontological argument* pp. 45-57

"The ontological argument of Charles Hartshorne serves as the speculative model for his neoclassical metaphysics. Neoclassicism requires both the necessary existence of God and his maximal relativity if its fundamental ontological principles of world, order, and beauty are to be grounded. The ontological argument proves directly the divine necessary existence and at the same time grounds indirectly the divine relativity which these fundamental principles require. The argument, therefore, is neoclassicism's speculative model in that within this model one is able to discover the structure of Charles Hartshorne's entire metaphysics."

Reprinted in:

"The course of philosophical development has been full of attempted proofs of the existence of God. Some of these have sought a basis in the bare necessities of thought, while others have tried to found themselves on the facts of experience. And, of these latter, some have founded themselves on very general facts, as that something exists, or that something is in motion, while others have tried to build on highly special facts, as that living beings are put together in a purposive manner, or that human beings are subject to certain improbable urges and passions, such as the zeal for righteousness, the love for useless truths and unprofitable beauties, as well as the many specifically religious needs and feelings. The general philosophical verdict is that none of these 'proofs' is truly compelling. The proofs based on the necessities of thought are universally regarded as fallacious: it is not thought possible to build bridges between mere abstractions and concrete existence. The proofs based on the general facts of existence and motion are only felt to be valid by a minority of thinkers, who seem quite powerless to communicate this sense of validity to others. And while most thinkers would accord weight to arguments resting on the special facts we have mentioned, they wouldn't think such arguments successful in ruling out a vast range of counter-possibilities. Religious people have, in fact, come to acquiesce in the total absence of any cogent proofs of the Being they believe in: they even find it positively satisfying that something so far surpassing clear conception should also surpass the possibility of demonstration. And non-religious people willingly mitigate their rejection with a tinge of agnosticism: they don't so much deny the existence of a God, as the existence of good reasons for believing in him. We shall, however, maintain in this essay that there isn't room, in the case we are examining, for all these attitudes of tentative surmise and doubt. For we shall try to show that the Divine Existence can only be conceived, in a religiously satisfactory manner, if we also conceive it as something inescapable and necessary, whether for thought or reality. From which it follows that our modern denial of necessity or rational evidence for such an existence amounts to a demonstration that there cannot be a God."

**Studies**

"First published in 1948, J.N. Findlay's article, "Can God's Existence Be Disproved?" remains interesting. Findlay argues that a religious object possessing unsurpassable superiority (or God), would be one whose existence is inescapable. By
"inescapable" he cannot mean "psychologically inconceivable", because then the mere fact that there are unbelievers would make atheism true. But if we interpret "inescapable" as "logically inconceivable", then God's existence is inescapable, that is, His nonexistence is logically inconceivable, only if He is a necessarily existing being. Since, according to Findlay, there are no necessarily existing beings, it follows that God does not exist. In effect, he maintains that God is by definition a necessarily existing being, but there are no such beings. However, this "ontological disproof of the existence of God" fails, because his claim that there are no necessarily existing beings is unsupported. This paper suggests the plausibility of the claim that there are necessarily existing beings without, however, supposing that God is among them. Rather than defending theism, the paper considers what would be required to establish atheism, namely, the unintelligibility of the concept of God due to certain antinomies. The position being advocated is not, strictly speaking, atheism but, rather, conceptual skepticism, that is, skepticism with regard to the very concept. It might be described as functional atheism, inasmuch as it entails suspending all matters having to do with God until the conceptual problems are satisfactorily resolved. This recommendation is different from the one offered by the logical positivists in a bygone era, since it has nothing to do with empirical verifiability. The antinomies are to a great extent "a priori" and therefore rest on a rationalist, not an empiricist, foundation."

"This paper attempts to present J. N. Findlay's ontological disproof of the existence of God as an extension of Hume and Kant's treatment of the ontological argument. This modal disproof is presented along side what is called the Leibnizian-Hartshornean modal proof in order to reveal the modern theistic modal paradox. In order to resolve this paradox, an interpretation of 'possibility' is presented along the lines suggested by Charles Hartshorne's justification of the premise asserting the possibility of the existence of God, that is, in terms of the other proofs."

"Kurt Gödel's version of the ontological argument was shown by J. Howard Sobel to be defective, but some plausible modifications in the argument result in a version which is immune to Sobel's objection. A definition is suggested which permits the proof of some of Gödel's axioms."

"Gödel's version of the modal ontological argument for the existence of God has been criticized by J. Howard Sobel (5) and modified by C. Anthony Anderson (1). In the present paper we consider the extent to which Anderson's emendation is defeated by the type of objection first offered by the Monk Gaunilo to St. Anselm's original Ontological Argument. And we try to push the analysis of this Gödelian argument a bit further to bring it into closer agreement with the details of Gödel's own formulation. Finally, we indicate what seems to be the main weakness of this emendation of Gödel's attempted proof."

"Gödel's 1970 proof of the existence of a god-like being (i.e., a being having all the 'perfective' properties) is investigated. The proof is streamlined and reformulated within the weakest logic possible - and intuitionistic version of second-order logic with a modal operator no stronger than the system K. It is shown that even in this weak context one can derive that it is necessary that a god-like being is at least possible. Finally, the prospects for a similar proof of the existence of the Devil (or,
more carefully, a being who lacks all perfective properties) is investigated. Technical reasons are given for why such a parallel proof of the existence of an evil being is not forthcoming."

---

"Finally, Part III is devoted to ontological proofs. Chapter 10 gives a brief history and analysis of arguments of Anselm, Descartes, and Leibniz. This is followed by a longer, still informal, presentation of the Gödel argument itself. Formal methods are applied in Chapter 11, where Gödel's proof is examined in great detail. While Gödel's argument is formally correct, some fundamental flaws are pointed out. One, noted by Sobel, is that it is too strong -- the modal system collapses. This could be seen as showing that free will is incompatible with Gödel's assumptions. Some ways out of this are explored. Another flaw is equally serious: Gödel assumes as an axiom something directly equivalent to a key conclusion of his argument. The problematic axiom is related to a principle Leibniz proposed as a way of dealing with a hole he found in an ontological proof of Descartes. Descartes, Leibniz, and Gödel (and also Anselm) all have proofs that stick at the same point: showing that the existence of God is possible.

If the Gödel argument is what you are interested in, start with Part III, and pick up earlier material as needed. Many of the uses of the formalism are relatively intuitive. Indeed, in Gödel's notes on his ontological argument, formal machinery is never discussed, yet it is possible to get a sense of what it is about anyway." (pp. XIII-XIV).

Gödels ontologischer Beweis pp. 354-360.

Available at UMI Dissertation Express. Order number: 9979637.

This article contains a presentation of Gödel's ontological proof, from both the intuitive and the formal points of view. Two other contemporary variations of it are also presented. The article discusses the philosophical and the theological criticisms of the proof. The conclusion to be drawn is that the soundness of Gödel's reasoning is an important logical result, which nevertheless demands further work of analysis. The metaphysical idea of a positive property (or positive set) for instance needs clarification.

"Gödel's proof of the necessary existence of God is analyzed from the point of view of modal logic together with related papers by Magari and Anderson. In particular, Magari's claim on redundancy in axioms is analyzed and shown to be only true for some extension of Gödel's system (but true for Anderson's modification, as it is shown elsewhere). Completeness of the underlying modal logic is proved; and it is shown that the "ontological" proof may use only the logic KD45 (logic of belief) instead of S5 (logic of knowledge)."

"Two variants of monadic fuzzy predicate logic are analyzed and compared with the full fuzzy predicate logic with respect to finite model property (properties) and arithmetical complexity of sets of tautologies, satisfiable formulas and of analogous notion restricted to finite models."

"Gödel, in a cryptic note given to Dana Scott in 1970, introduces the notion of a positive property. (Thus the formalized version uses a Third-Order constant, the predicate P(F), expressing the positivity of the property F). The plausibility of his 'axioms' and the theological relevance of its conclusion depend on the interpretation of this notion; Gödel says that it means 'positive in the moral aesthetic sense (independently of the accidental structure of the world), but also allows that it may mean 'pure "attribution" as opposed to "privation".' The evidence available from his
notebooks suggests that he never found an interpretation of this notion that fully satisfied him, and it is perhaps best to assume that he thought of his ontological argument not as a conclusive proof of the existence of God, but as an attempt at a reconstruction of Leibniz's argument. In any event, he laid down certain axioms concerning the notion. Any property entailed by a positive property is positive, and the conjunction of two positive properties (the property, that is, that an individual has if and only if it has both of the given properties) is positive. Together, these amount to saying that the positive properties form an ultrafilter on the Boolean algebra of properties. (Gödel adds in a footnote that the positivity of conjunctions of positive properties holds for arbitrary numbers of conjuncts, not just for two: as we shall see, this includes infinite numbers.) Further, positivity is a non-contingent feature of a property: any property which is positive is necessarily positive, and no property which is not positive could be.

Another axiom said that, of any pair of properties consisting of a property and its negation (the property necessarily holding of all and only the individuals not possessing the first property), precisely one is positive. (Positive properties form an ultrafilter.) We are now in a position to prove our first theorem: positive properties are at least possibly instantiated, Proof: the contradictory property (self-non-identity) entails all properties, including Its own negation (self-Identity), so if it were positive both properties of such a pair would be positive. (As has been noted by commentators, the proof uses only part of the strength of the latest axiom: of a pair of a property and its negation at most one is positive.)

Gödel's remaining axiom is formulated in terms of a defined notion. First define a property to be an essence of an individual if it is a property, possessed by the individual (Gödel left this clause out in (1), but this appears to have been an oversight - iit is Included In related manuscripts), which entails every property the individual has. The terminology is somewhat unfortunate: the notion defined is close to Leibniz's notion of the complete concept of an object, but is not at all what current philosophical usage calls an essence. 'Essence' and 'essentialism' were bad words for most analytic philosophers of the 1960s -- many found the doctrines of Kripke downright shocking -- but, with the flowering of modal metaphysics since, they have come to have well-understood and generally agreed meanings, defined in terms of de re modal locutions. An individual, x, has a property, F, essentially iff x has F and it is necessarily the case that x, provided it exists, has F. An essence of x, in this post-1970 sense, is a property which entails all and only the properties x has essentially. To avoid confusion, therefore, let us re-christen Gödel's notion: the property an individual has that entails every property it has is its character." pp. 364-365.

Notes omitted.

A novel on the ontological proof, useful as a non-technical, but reliable, introduction to Gödel's argument.

"We describe a K B Gödelian ontological system, and some other weak systems, in a fully formal way using theory of types and natural deduction, and present a completeness proof in its main and specific parts. We technically and philosophically analyze and comment on the systems (mainly with respect to the relativism of values) and include a sketch of some connected aspect of Gödel's relation to Kant.

"In his sketch of an Ontological Proof (dated February 10th 1970) Kurt Gödel introduces the concept of a positive property and proves the necessary existence of exact one being which instantiates all positive properties -- he calls it 'summun bonum'. Special emphasis in the discussion of this argument is put on the logical structure of positive property and the comparison with the concept of (pure) perfection as it is used in traditional philosophy of God for dealing with divine attributes."

"In discussing the rationality of religious belief, Franz von Kutschera (Vernuft und Glaube, 1990) criticises attempts to clarify divine attributes and to demonstrate the existence of God, including Gödel's Ontological Proof. The article argues that the criticism proposed neglects the concept of pure perfection and that the logical structure of this concept can be clarified in further developing Gödel's concept of positive property."

"The main thesis of this paper is that Gödel's ontological argument is subject to a kind of objection which has hitherto been overlooked, but which has often been levelled at other ontological arguments, viz. that it can be paralleled by apparently equally persuasive proofs of the existence of beings in which no one should wish to believe. (Compare Gaunilo's objection to St. Anselm: No one should wish to believe in the existence of an island than which no greater island can be conceived.)"

"In recent years there has been a surge of interest in Gödel's ontological proof of the existence of God. Gödel showed his proof (Gödel *1970) to Scott, and Scott made a
note of the proof and presented it in his seminar at Princeton University in the fall of 1970. From then on, Gödel's proof has become widely circulated. It was finally published in Sobel 1987 as an appendix and later included in volume three of Gödel's *Collected Works*. Recent discussions of Gödel's proof mostly start from Sobel's criticisms. As is well known, the most influential criticism of Sobel is that Gödel's proof leads to a consequence unacceptable to most philosophers, i.e. that all truths are necessary truths. Anderson 1990 viewed this as the modal collapse of Gödel's assumptions, and tried to save Gödel's proof by some plausible modifications. Anderson's emendation secured many interesting responses including Oppy 1996, where a parody of the Gödelian proof reminiscent of Gaunilo's objection to Anselm's proof is presented. As one might expect, such a parody has invited friends of ontological proofs to follow in the footsteps of Anselm.

In spite of all this extensive concern, it is not certain whether there is any improvement in understanding the motivations of Gödel's ontological proof. Why was Gödel so preoccupied with completing his own ontological proof? To the best of my knowledge, no one has dealt with this basic question seriously enough to answer it.

In this article, I propose to examine Gödel's ideas against a somewhat larger background in order to understand his motivation for establishing the ontological proof.

I shall point out that the value of Gödel's proof is to be found in the possible role of his proof of the existence of God in his philosophy as a whole as well as in its relative merit as an ontological proof. Hopefully, my guiding question as to Gödel's motivation will turn out to be extremely fruitful by enabling us to fathom his mind regarding God and mathematics.

"The paper contains a full version of the well-known Gödel's variant of the ontological argument. It is based on the Leibniz's version of the proof, the axiom systems of Gödel 1970 and of Anderson 1990, with some weakenings. We discriminate between several types of existence; the form of existence of God we assert is, in a constructive fashion, a weaker one. Later we deal with Kant's criticism against the predicate of existence and offer several commentaries on the proof, and on topics such as perfection and existence."

"The aim of this paper is to prove strong completeness theorems for several Anderson-like variants of Gödel's theory wrt. classes of modal structures, in which: (i). 1st order terms receive only rigid extensions in the constant objectual 1st order domain; (ii). 2nd order terms receive nonrigid extensions in preselected world-relative objectual domains of 2nd order and rigid intensions in the constant conceptual 2nd order domain."

Norman Malcolm (1911-1990)

"I believe that in Anselm's Proslogion and Responsio editoris there are two different pieces of reasoning which he did not distinguish from one another, and that a good deal of light may be shed on the philosophical problem of 'the ontological argument' if we do distinguish them. In Chapter 2 of the Proslogion Anselm says that we believe that God is something a greater than which cannot be conceived. (The Latin is aliquid quo nihil maim cogitari possit. Anselm sometimes uses the alternative expressions aliquid quo maim nihil cogitari potest, id quo maim cogitari nequit, aliquid quo maim cogitari non valet.) Even the fool of the Psalm who says in his heart there is no God, when he hears this very thing that Anselm says, namely, "something a greater than which cannot be conceived," understands what he hears, and what he understands is in his understanding though he does not understand that it exists."

Studies

"Evidence is presented in support of the following theses: (1) Prior to Anselm, Ibn Sina formulated a version of the ontological argument which corresponds to Malcolm's second version of this argument. (2) An examination of Ibn Sina's formulation permits new criticism of Malcolm's version. The latter makes the unwarranted deduction that in its metaphysical use "the necessary existent" is identified with "God" in its ordinary religious use. Further, Malcolm's informal explication of "the necessary existent" in terms of "dependency on privations" contains logical confusions. Departing from the same premise as Malcolm, Ibn Sina deduces a different conclusion, identifying "the necessary existent" not with a substantial creator, but with the "source of the world's dependence," analogous to the so-called "principle of sufficient reason" used by the mystics. To clarify the alleged contentions of the argument, analytical distinctions are drawn between various metaphysical categories, e.g., "essence," "existence," and "substance".

Jan Berg (1928-)

Texts

Studies

"Jan Berg has presented, in a painstaking and highly compressed paper, St. Anselm's *Ontological Argument*, dressed in the garb of a formal language, L. L is the first-order predicate calculus with identity and, particularly, with Russell's theory of descriptions. It is the task of Berg's paper to reconstruct Anselm's argument in L with an eye towards (1) preserving historical accuracy and (2) preventing the argument from begging the question. In this paper I will argue that he has not completely satisfied either objective, and further, that the reason he has not is that Russell's theory of descriptions is particularly unsuitable for Anselm's argument. I will then investigate the implications of reconstructing the argument in L, supplemented not with Russell's theory, but with some alternative theories."

John Howard Sobel (1929 - 2010)

"Notes in Gödel's "Nachlass" contain a sketch of a theory that culminates in a theorem that says that it is necessary that there is a being that has every positive property. I observe that in the theory a being with all positive properties would have only necessarily instantiated properties, and demonstrate that modalities collapse in the theory -- in it everything actual or true is so of logical necessity."

"This response to critics includes elaboration of ideas and arguments in Logic and Theism regarding cumulative arguments for theism, probabilities, 'fine-tuning' and many worlds, and Gödel's ontological proof, probabilities subjective and objective, and Mackiean doubts concerning the latter, are explained. There is discussion of 'dividing the evidence' in Bayesian confirmation exercises, with some of it allowed to target 'priors' of hypotheses, and there is a note on my problems with old evidence. Tentatively explored are Gödel's considered modal opinions, which may have included that every truth is necessary, and every falsehood impossible."

"Charles Hartshorne derives in a sentential modal logic, that "perfection exists" from the premises that "perfection is not impossible" and "perfection could not exist contingently." These premises are, on certain assumptions, equivalent to corollaries to which Anselm was committed of the premises of the major argument in Proslogion 2, namely, that "(S)omething-than-which-nothing-greater-can-be-thought exists in the mind" and that ":(T)hat-than-which-a-greater-cannot-be-thought cannot exist in the mind alone," for the conclusion that " something-than-which-a-greater-cannot-be-thought exists both in the mind and in reality," which argument is, on a generous construction, valid in a quantificational logic for indefinite descriptions."

Studies

"Kurt Gödel left with his student Dana Scott two pages of notes in which he sketched a new version of Anselm's ontological proof of God's existence. In his most recent book (*), Howard Sobel spends the greater part of a chapter dedicating his considerable talents to an elucidation and critique of Gödel's argument, as well as to an emended version of that argument proposed by Anthony Anderson. The ontological argument has garnered quite a bit of attention in the last fifty years. In most cases, philosophers have agreed that the argument is unsuccessful but have disagreed vigorously over where exactly the fatal flaw lies. This paper, will to some extent, follow the familiar pattern. I will argue that Gödel's argument is unsuccessful, but I hope to show that Sobel and Anderson have both misdiagnosed its failure, and, consequently, Anderson's attempted repairs are likewise unsuccessful. However, I will close with a sketch of my own proposed repair of Gödel's argument, and I will suggest that, although the repaired argument is not by itself a successful theistic proof, it may represent a fruitful matter for future investigation."

Alvin Plantinga (1932-)

Texts

   "The Ontological Argument for the existence of God has fascinated and puzzled philosophers ever since it was first formulated by St. Anselm, I suppose most philosophers have been inclined to reject the argument, although it has an illustrious line of defenders extending to the present and presently terminating in Professors Malcolm and Hartshorne. Many philosophers have tried to give general refutations of the argument-refutations designed to show that no version of it can possibly succeed-of which the most important is, perhaps, Kant's objection, with its several contemporary variations. I believe that none of these general refutations are successful; in what follows I shall support this belief by critically examining Kant's objection."

   Chapter Two: The Ontological Argument (I) 26; Chapter Three: The Ontological Argument (II) 64-94.

Studies

"The bulk of the paper is devoted to an examination of the 'interpretations' which Alvin Plantinga suggests as to what Kant was saying in his discussion of the ontological argument in the first "Critique." I conclude with an independent account of what Kant was getting at."

"R. L. Purtill has claimed that the ontological argument that Plantinga presents in *The nature of necessity* is basically the same as that offered in Hartshorne's *The logic of perfection* and that it falls victim to the same criticisms. I argue that Plantinga's ontological argument is different enough "not" to fall victim to Purtill's criticisms. What makes Plantinga's argument different, however, also makes it vulnerable to a different criticism: the God of Plantinga's conclusion is not a being greater than which none can be conceived."

"In this paper I shall delimit an infinite class of valid arguments I shall call ontic arguments. These arguments proceed from a premise that asserts of a set of properties that it satisfies certain conditions, to the conclusion that there exists something that exemplifies that set of properties. If the conclusion of an ontic argument can be read as asserting the existence of a Deity, then I call that argument an ontological argument. In the present sense of this term, there are infinitely many ontological arguments, all of them valid. I shall devote special attention to one particular ontological argument, the most modest, since many of its features are shared by all other ontological arguments. I shall argue that anyone who wants to claim either that this argument is sound or that it is unsound is faced with grave difficulties.

I shall take it for granted that the connection between what I call ontological arguments and traditional presentations of "the" ontological argument (there is, of course, no argument that can be called the ontological argument) is plain. I make the following historical claim without arguing for it: Every well-known "version of the ontological argument" is either, (I) essentially the same as one of the arguments called ontological herein, or (ii) invalid or outrageously question-begging, or (iii) stated in language so confusing it is not possible to say with any confidence just what its premises are or what their relation to its conclusion is supposed to be. I should myself be inclined to place all historical "versions of the ontological argument" in category (iii), but this is a function of the way I read them: I would place many of the arguments certain contemporary philosophers claim to see in the original sources in one of the first two categories. I shall examine one contemporary argument, that presented by Alvin Plantinga in *The nature of necessity* (Chapter X) and in *God, freedom, and evil* (pp. 85-112). Plantinga's argument falls into category (I). I shall dispute Plantinga's contention that his argument can be used to show that
belief in God is not contrary to reason.

"This paper is a critical overview of Alvin Plantinga's recent book entitled The nature of necessity. While noting the many virtues of the work, I criticise Plantinga on a number of points, major and minor. In particular I argue that Plantinga's notion of an "essence" is lacking in content and that his formulation of the ontological argument does not advance the question much beyond the stage reached by Hartshorne's formulation of the argument and criticisms of this formulation by myself and others. Plantinga also fails to distinguish sufficiently between narrowly logical necessity and broadly logical necessity and between the direct and inverse probabilities involved in a probabilistic version of the argument from evil. I also criticise Plantinga's strategy of merely defending theistic belief as not disprovable and in that sense rational; in my view this is too modest an aim for the theistic philosopher."

"In chapter 10 of his book, The nature of necessity, Alvin Plantinga contends that although many versions of the ontological argument are unsound, there is at least one that is valid, and whose premises may reasonably be accepted. It is argued in this paper that Plantinga's defense of this contention is unsatisfactory, and that the version of the ontological argument which he offers is unacceptable for at least two reasons. In the first place, it involves a form of argumentation which if applied to structurally identical, and equally justified premises, leads to contradictory conclusions. Secondly, the crucial premise in Plantinga's argument can be seen to be necessarily false, given an adequate account of the truth conditions of modal statements."

David Kellogg Lewis (1941-2001)

Texts

"A version of Anselm's first ontological argument is symbolized in non-modal logic with explicit reference to conceivable worlds and beings that exist therein. An ambiguity appears: one symbolization yields an invalid argument with credible premises while another symbolization yields a valid argument with premises we have no good, non-circular reason to accept. The credibility of one premise of the second version turns on the nature of actuality; I propose that "actual" is an indexical term
closely analogous to 'present'."

Studies

"David Lewis' analysis of Anselm's ontological argument shows that something is wrong with it but not, despite his claim, what is wrong with it. I offer a further analysis in the spirit of Lewis', taking account of a four-fold ambiguity in the notion of 'greater'. When the ambiguity is resolved, it turns out that on some readings the argument is valid but the premisses are not each more plausible than the conclusion. On other readings the argument is invalid but the premisses are trivially true. The argument's illusion of plausibility trades on the ambiguity."

Robert Maydole (1941-)

Texts

"In the first section of this paper I employ an ontological type argument to show that the mere possibility of God's existence implies, in a standard system of quantified modal logic, the actual existence of God. I also show that there is at most one God. In the second section I argue that the very idea of God is meaningful. In the third section I use a cosmological argument modeled on St Thomas' Third Way to prove that God exists. The mediate conclusion is that God exists. In the final section of the paper I discuss the plausibility of adopting the modal logic previously employed."

"The 'modal perfection argument' (MPA) for the existence of a Supreme Being is a new ontological argument that is rooted in the insights of Anselm, Leibniz and Gödel. Something is supreme if and only if nothing is possibly greater, and a perfection is a property that it is better to have than not. The premises of MPA are that supremity is a perfection, perfections entail only perfections, and the negation of a perfection is not a perfection. I do three things in this paper. First, I prove that MPA is valid by construction a formal deduction of it in second order modal logic. Second, I argue that its premises are true. Third, I defend the argument of the logic used against some likely objections."
Robert Maydole has recently presented a sophisticated ontological argument that he calls the modal perfection argument for the existence of a Supreme Being. While this ontological argument is probably better than most of its peers, it is nonetheless open to at least one decisive objection. The purpose of this brief comment is to develop that objection. I claim that this objection indicates an important further point about the concept of entailment and its role in ontological arguments at large, the recognition of which helps to refute other conceivable ontological arguments.

Graham Oppy (1960-)

In "The Ontological Argument" (Philosophy 63, 1988, pp. 83-91) Stephen Makin offers a defence of what he calls 'Anselm Ontological Argument'. I am not much interested in the question whether the argument which Makin defends can properly be attributed to St. Anselm, though I suspect that there is considerable room for disagreement on this score; rather, I want to suggest that the argument which Makin offers is quite clearly invalid (and hence unsound) and I also want to suggest that it is

Graham Oppy (1960-)

In "The Ontological Argument" (Philosophy 63, 1988, pp. 83-91) Stephen Makin offers a defence of what he calls 'Anselm Ontological Argument'. I am not much interested in the question whether the argument which Makin defends can properly be attributed to St. Anselm, though I suspect that there is considerable room for disagreement on this score; rather, I want to suggest that the argument which Makin offers is quite clearly invalid (and hence unsound) and I also want to suggest that it is
very plausible to suppose that any version of the ontological argument is vitiated by
the same fallacy in which Makin's argument is entrapped."

"In 'The Ontological Argument Defended' (1), Stephen Makin defends the following
version of the ontological argument:

Makin's Argument

(Df) S is the concept: something than which nothing greater can be conceived.

(A) If F is, and G is not, a selectively and intrinsically necessarily exemplified
concept, then, ceteris paribus, F's are greater than G's.

Suppose:

(B) S is not (selectively and intrinsically) necessarily exemplified.

Then:

(C) One could conceive of what is greater than S.

But that is absurd. So the supposition (B) must be rejected:

(D) S is (selectively and intrinsically) necessarily exemplified. (2)

I have two criticisms to make of this argument. First, it can be paralleled to its
discredit. And second, it can be shown independently that the argument fails to
establish the conclusion that there actually exists a being than which none greater can
be conceived. I shall argue for each of these contentions in turn."

247-255.

(2) Ibid., 248. I have changed the labelling of the sentences; I shall use my own
labelling of sentences throughout. Makin explains the meaning of, and the need for,
the qualification that S be selectively and intrinsically necessarily exemplified at
250-252.

University Press.

"There is now a considerable secondary literature on Gödel's ontological arguments;
in particular, interested readers should consult Sobel 1987, Anderson 1990 and
Adams 1995. In this note, I wish to draw attention to an objection to these arguments
which has hitherto gone unnoticed. This objection does not depend upon fine details
of the formulation of the arguments; I arbitrarily choose to develop the objection in
connection with the formulation provided by Anderson.

In brief, the argument I shall consider may be summarized thus:

Definition 1: x is God-like iff x has as essential properties those and only those
properties which are positive.

Definition 2: A is an essence of x iff for every property B, x has B necessarily iff A
entails B.

Definition 3: x necessarily exists iff every essence of x is necessarily exemplified.

Axiom 1: If a property is positive, then its negation is not positive.

Axiom 2: Any property entailed by [= strictly implied by] a positive property is
positive.
Axiom 3: The property of being God-like is positive.
Axiom 4: If a property is positive, then it is necessarily positive.
Axiom 5: Necessary existence is positive.
Theorem 1: If a property is positive, then it is consistent [= possibly exemplified].
Corollary 1: The property of being God-like is consistent.
Theorem 2: If something is God-like, then the property of being God-like is an essence of that thing.
Theorem 3: Necessarily, the property of being God-like is exemplified.

Given a sufficiently generous conception of properties, and granted the acceptability of the underlying modal logic, the theorems listed do follow from the axioms. (So say Gödel, Dana Scott, Sobel, Anderson, and Adams. Who am I to disagree?) Perhaps one might object to the conception of properties and/or the modal logic. But one doesn't need to: the proof is demonstrably no good even if these things are accepted.

The problem - as with virtually all ontological arguments known to me - lies in the fact that there are parallel arguments which can be constructed, which seem no less acceptable to atheists and agnostics, but whose acceptance leads to absurd results.

(1) In Oppy (1995, p. 225), I write: 'It may be possible to reinterpret the (Gödelian) proof in a damaging way, though I have not been able to see how to do this.' I think that my vision has now improved a little: hence the present paper.

In "Gödelian Ontological Arguments" (*Analysis* 56, 1996), I argue that Gödel's ontological argument is subject to a Gaunilo-style parody. In the present paper, I provide an emended version of the argument that avoids objections raised by Mike Gettings in his "Gödel's Ontological Argument: A Reply to Oppy" (*Analysis* 59, 1999)."

Studies

"Graham Oppy has contributed recently to the discussion of Gödel's ontological argument with an attempted refutation (Oppy 1996). Although seemingly promising, I will show here that this attempt fails to undermine Gödel's argument. Very briefly, Gödel's argument proceeds in the following way. (1) One begins with the primitive notion of a positive property. A positive property is a 'great-making' property which entails no defect. The property of Godlikeness (G) is defined in this way: One is God-like iff one has as essential properties all and only positive properties. Given a number of axioms concerning positive properties, one can prove that a unique possible individual instantiates God-likeness, i.e. that there is (at least) one possible world inhabited by this unique God-like being. Furthermore, necessary
existence is a positive property. Thus, in some possible world this unique God-like being necessarily exists, and so, in SS modal logic, this being exists in the actual world.

Oppy's strategy is the strategy which the monk Gaunilo used to try to refute Anselm's ontological argument. This strategy attempts to show that if the theist purports to have proven the existence of God, the same reasoning may be used to prove the existence of many theologically repugnant entities, e.g. demi-gods, perfect islands, etc. Oppy's particular objection is motivated in the following way: since the theist defines God-likeness, the atheist may define a similar property, call it 'God*likeness' ('G*'). Let God*likeness be the property one has iff one has as essential properties only and almost all of the positive properties, including necessary existence (e.g., all positive properties except omniscience, and only positive properties). Since two things are identical only if they share the same essential properties, the definition of God*likeness ensures that the atheist's being is distinct from God. Furthermore, a God*-like being must also be necessarily existent, since necessary existence is a property entailed by God*likeness.

Oppy cannot draw the conclusion that such a being exists, however. There is a crucial disanalogy between his argument and the theist's. This disanalogy becomes evident when we look at Oppy's argument, which he presents in two formulations. These two formulations are similar, and I will show that the first is defective, and argue that the second fails for similar reasons." pp. 309-310.

(1) See Anderson 1990 for details of a strengthened formulation of Gödel's argument. This is the formulation which both Oppy and I address, although I will also consider a revision to this argument. For now, 'Gödel's argument' and 'the theist's argument' will refer to the formulation found in Anderson 1990.
The S5-based ontological argument assumes (1) possibly there is a maximally great being (MGB) and (2) that any MGB must be essentially such and have necessary existence, so that by S5 there is a MGB. The weakest point is (1). Samkara (788-820 AD) argued that if something is impossible, then one cannot have a seeming of it. Therefore, by modus tollens, if a mystic has a (quasi-perceptual) seeming of a MGB, then possibly there is a MGB, and hence (1) is true, and there is a MGB. A variant based on a radical dependence ontological argument is also discussed.

interesting article, "Anselm's Ontological Arguments," which recently appeared in the [Philosophical] Review (LXIX, 1960, 41-62). There Malcolm distinguishes two different arguments in Anselm's Proslogion. My treatment of Anselm is restricted to what Malcolm calls the first argument, and is concerned with the sort of considerations which are commonly used in rejecting it. About what Malcolm calls the second argument, I have nothing to say in this essay. My opinion is that the second argument is ultimately dependent on the first, but that is a long story."

"St Thomas rejects the ontological argument but does not deny that the concept of God entails his essence. Instead, he relies on the distinction between a proposition's being necessary and its being known "a priori", which is related to the problem of knowing God's possibility "a priori", the Achilles heel of contemporary modal arguments. Why can we not know God's possibility "a priori"? The doctrine of analogy claims that God-language is too obscure to authorize such deductions. The rejection of irreducibly analogous language leads to rationalism, which accepts the ontological argument, or to fideism/agnosticism, which reject it. Modern philosophers were in tacit agreement in ignoring the distinction between "a priority" and necessity, and on the irrelevance of analogy. Hence they oscillated between acceptance of the ontological argument, and the total rejection of significant God-talk. Recent trends are favorable to a reconsideration of both points, and to an appreciation of their adumbration in the writings of Aquinas."

"I consider modal ontological arguments of the form, 'God is possible; therefore, God actually exists', which conceive of God in terms of properties"indexed to the actual world. The use of such indexed properties can ensure the validity of these arguments but it also transforms their possibility premises into a posteriori claims. Because of this, a typical inquirer is not going to be able to get into some desired epistemic position toward the possibility premise (e.g., knowing it, or determining
that it is rationally acceptable) without first having to get into that same position toward the conclusion of the argument. Thus it is not clear for whom these arguments could establish even the rationality of their conclusions."

"Abstract. This paper presents a reconstruction of Anselm's ontological argument within the framework of Meinong's Gegenstandstheorie. It is shown that, within this framework and assuming a certain basic theological view, the argument has some force. Unlike many replies to the argument, the paper concludes undermining the theological view rather than the premise that existence is a predicate.

The ontological argument is an old piece of theological reasoning that has a long and interesting history in the course of Western philosophy. The main author of this argument was the Eleventh-century English friar Anselm of Canterbury, according to Koyré "one of the profoundest and most exalted of spirits," but Descartes' formulation (which he produced without being aware of Anselm's work) is deemed also as one of the standard presentations of the argument.

I shall devote the first part of this chapter to present Anselm's argument. I have found convenient and natural to present the ontological argument within the framework of Meinong's theory of objects, and that is why I shall devote the first section of the first part to present Meinong's doctrine. In the second and last part I will provide a Reformed assessment of the ontological argument."

"That anyone should uphold the ontological argument as demonstrative of the existence of God is surprising, yet Professor Norman Malcolm seems perfectly serious in his recent defense of one form of it. (1) He maintains that the argument has two variants, one, which he rejects, concludes that God exists and the other, which he accepts, maintains that God has necessary existence. This acceptance is the more remarkable because Malcolm does not base his contention on any Neoplatonic identification of existence with reality and fullness of being. Granted such a metaphysics, the argument would, seem to follow, but Malcolm does not take this approach and indeed professes to have difficulty in comprehending the doctrine of negation and privation characteristic, of it (p. 59). Without such metaphysical buttressing, the argument is quite weak, but it may be well first to show that
something is wrong with it before going on to consider what is wrong."

"The logic of existent and nonexistent objects provides a formal theory of reference and true predication for ordinary discourse, the semantics of ontological commitment, and logic of fiction. The intensional logic proposed in what follows offers a rigorous object theory semantics with nonstandard propositional and predicate inference machinery. The system is distinguished from previous formalizations of object theory by formal criteria for nuclear (constitutive) and extranuclear (nonconstitutive) properties, three-valued propositional semantics for predications of nuclear properties to incomplete nonexistent objects for which the objects ostensibly are undetermined, nonstandard set theory semantics with unrestricted comprehension for object theory predicate semantics (licensed by existence restrictions on abstraction equivalence), demonstrations of internal determinacy, consistency, and Henkin completeness, nonstandard deduction theorem, and consistency considerations in light of free assumption and unrestricted comprehension."

"In this paper, the authors show that there is a reading of St. Anselm's ontological argument in *Proslogium* I that is logically valid (the premises entail the conclusion). This reading takes Anselm's use of the definite description "that than which nothing greater can be conceived" seriously. Consider a first-order language and logic in
which definite descriptions are genuine terms, and in which the quantified sentence "there is an x such that..." does not imply "x exists". Then, using an ordinary logic of descriptions and a connected greater-than relation, God's existence logically follows from the claims: (a) there is a conceivable thing than which nothing greater is conceivable, and (b) if x doesn't exist, something greater than x can be conceived. To deny the conclusion, one must deny one of the premises. However, the argument involves no modal inferences and, interestingly, Descartes' ontological argument can be derived from it.

"In this paper, the authors evaluate the ontological argument they developed in their 1991 paper as to soundness. They focus on Anselm's first premise, which asserts: there is a conceivable thing than which nothing greater is conceivable. After suggesting reasons why this premise is false, the authors show that there is a reading of this premise on which it is true. Such a premise can be used in a valid and sound reconstruction of the ontological argument. This argument is developed in precise detail, but the authors show that the conclusion, the formal version of which is a reading of the claim that "God exists", doesn't quite achieve the end Anselm desired."

"This is an examination of the ontological argument and its consistency with existential propositions. Clarification of the ontological argument is made in light of Hume, Kant, and Carnap with regard to its empirical, predicative, a priori, a posteriori and linguistic proofs and refutations. A further refinement of the presentation is the establishment of the intensional and extensional character of the ontological argument."

"If God exists, he exists necessarily is a premise in modal versions of the ontological argument. I argue that the proposition isn't clearly entailed by theism. Appeals to intuition aren't conclusive, and alleged proofs place controversial constructions on divine attributes or employ controversial philosophical theses. The proposition is,
however, plausible."
